Salve Regina University

Request for Bid/Proposal: HRSA Grant – Simulation Recording and Cameras

Vendor Questions and Salve Regina University Responses

1. Q. In the items/features requested on page 5, cloud-based storage is specified. Should the proposed solution include a cloud component or is a fully on-premise solution acceptable?

    A. **The solution does not necessarily need to be a cloud component, but it needs to be accessible remotely via an interface of some kind.**

2. Q. In the items/features requested on page 6, PTZ camera and fixed camera packages are specified. Should we assume 1 fixed and 1 ptz camera for each of the seven spaces or are there spaces within each room that require additional views?

    A. **This is the minimum requirement, and we are prepared to review and evaluate alternative solutions including mobile cameras in order to increase versatility in additional rooms as needed.**

3. Q. In the items/features requested on page 5, the second item notes "supports current equipment" – what is the make and model of the current equipment that will need to be supported, and which rooms is that current equipment located in?

    A. **Currently researching**

4. Q. Please elaborate, what are Salve's scenario cloud case studies and what format are they in?

    A. **We are looking for a solution where we can import our current scenarios without having to retype/enter the information.**

5. Q. Can you send an official floorplan?

    A. **It is also posted to the website.**

6. Q. Please provide additional details regarding the 7 rooms that are to be recorded: what type of simulation events will occur in each room, how many beds per room, how many simulators per room, what type of simulators per room, do you have a preference for number of cameras per room?

    A. **General simulations will be occurring in each room as well as full patient assessments. All rooms have 1 bed per room except for the large lab which has 8. Five rooms have one simulator, 1 room has 8 and 3 rooms are exam rooms for OSECs. We only have Laerdal simulators. We will need at least 1 PTZ camera per**

room except for the large lab that will need approximately 4 cameras. We may also require fixed cameras.

7. Q. Do you have an existing electronic health record system that you are requesting integration with? If so, please provide the system name and type of integration you are seeking.

    A. No current EHR although we use Shadow Health.

8. Q. Please provide more information on Salve's scenario cloud case studies and the type of support you are seeking.

    A. Similar answer to question 4; we are looking for a solution where we can import scenarios without retyping.

9. Q. What are the existing learning management systems (LMS) that require compatibility with?

    A. Canvas

10. Q. Are you interested in Inventory Management and Resource Management capabilities immediately or for future upgrade options?

    A. Not at this time.

11. Q. Will simulation vendors be responsible for cabling?

    A. Yes

12. Q. Our floorplan annotations and line drawings are approximate as we are not attached to an architectural firm, is that sufficient?

    A. Yes
